

1. Задание

Включить 3 источника света, задать отражающие свойства поверхностей, положение и цвет источников света. Рекомендуется цвет поверхностей сделать одинаковым, а отражающие свойства – разными. Вывести несколько объемных объектов. Источники света должны иметь различный цвет. Необходимо организовать вращение сцены, управляемое с клавиатуры (сцена с объектами объекты вращается, источники неподвижны)

2. Текст программы

```
#include <glut.h>
```

```
GLfloat rx = 0;          // Угол поворота сцены вокруг оси X
```

```
